

How to fit your Pure Hydration @ Home Fridge Filter System

1. Fit the Filter Head

a) Attach the filter head to a cupboard or other suitable surface using the two screws provided, ensuring that there is enough room for the filter when inserted.

2. Connect your System to the Head

- a) Turn off your water supply and remove the old filter system. Cleanly cut the ends of your existing pipes to ensure a good connection.
- b) Clear your work space and wash your hands before proceeding further.
- c) Insert the pipe coming from your water flow into the adapter on the end of the red tube.
- d) Insert the tube that comes from your fridge dispenser into the right hand side of the head. Make sure that both tubes are pushed home firmly into the head.
- e) Insert the filter by pushing gently into the head and twist to lock into position.

3. Enjoy Great Tasting Water

Check that your new Pure Hydration system operates correctly by allowing the water to run clear before drinking.
